

Here are a few things to test for:

1. Pawn promotion should yield options to select new piece.

When you are about to promote a pawn (i.e the situation shows above), make sure that the new box that appears lets you select a piece to promote (and that set includes the Missionary)

2. Make sure the top of the Applet says Illics at all times. Illics (Illinois Computer System) controls the MVC architecture which is responsible to executing the correct parts within the program.
3. Components will be added to allow you to choose between single player and multiplayer. At the time, two players that understand the game can play.
